

**For Immediate Release**

## **Liber8Now GSR8 Gunshot Detection Deployed with Lynx Systems**

*Form C Dry Contact Connectivity*

**May 14, 2025**

**Atlanta, Georgia and Richardson, Texas.** Liber8Now, Inc. and Lynx Systems announced today that the companies have integrated and successfully deployed the GSR8 gunshot detection solution with the LynxIcon mass notification system. The initial joint customer is a VA Hospital installed by Alexandria, VA-based Janus Advisory Group.

Todd Cripe, Liber8Now CEO, stated: “VA Hospitals are but one of many groups that specify Form C dry contact connectivity. POE+ (ethernet) is typically utilized for connectivity in new construction, but globally more than 50% of all locations with safety and security devices are wired for dry contact. The GSR8 design supports both dry contact and POE+, but Lynx Systems has produced a robust interface that enables sites with existing dry contact to add gunshot detection to their already installed systems at a low cost.”

Kevin Petty, Lynx Systems President, stated: “We customized one of our existing products to supply power and accept a dry contact closure—seamlessly enabling their sensor to integrate with the Lynx platform. This connection instantly unlocks powerful communication capabilities, including computer and HDMI pop-up notifications, real-time dispatch alerts over handheld radios, and SMS messaging, ensuring critical information reaches the right people immediately.”

**About Lynx Systems:** Lynx Systems revolutionizes facility and campus safety with network-based duress and targeted mass notification solutions. By automating the communication of dynamic information from alarms to handheld radios, we eliminate human error, whether a door is propped open, a panic button is pressed, or analytics detect a risk. Our innovative technology ensures that organizations respond quickly and effectively during emergencies, creating safer environments.
